

ZÜRCHER KOLLOQUIUM ÜBER ANWENDUNGSORIENTIERTE STATISTIK

Einladung zum Kolloquium

Thema **Discrete Data Modelling (Introduction)**

Referent **Prof. J. K. Lindsey**
Limburgs University, Belgium

Datum, Zeit Donnerstag, November 2, 2000 , 16.15 – ca. 17.30

Ort Hauptgebäude der Universität, Hörsaal **E 18**

Abstract

Simple log linear and logistic models, and the relationship between them, will be introduced using small contingency tables as examples. Analogies will be drawn with the related standard linear models. Ways of structuring such models will be considered.

In the second half, some more complex problems involving discrete data will be presented without mathematical details. Examples include overdispersion, random effects, and time series.
