Computing “quasi-AIC” (QAIC), in R is a minor pain, because the R Core team (or at least the ones who wrote `glm`, `glmmPQL`, etc.) are purists and don’t believe that quasi- models should report a likelihood. As far as I know, there are three R packages that compute/handle QAIC: `bbmle`, `AICcmodavg` (both on CRAN) and `MuMin` (formerly known as `dRedging`, on r-forge).

The basic problem is that quasi- model fits with `glm` return an `NA` for the log-likelihood, while the dispersion parameter (\hat{c} , ϕ , whatever you want to call it) is only reported for quasi- models. Various ways to get around this are:

- fit the model twice, once with a regular likelihood model (`family=binomial`, `poisson`, etc.) and once with the quasi- variant — extract the log-likelihood from the former and the dispersion parameter from the latter
- only fit the regular model; extract the overdispersion parameter manually with

```
dfun <- function(object) {  
  with(object,sum((weights * residuals^2)[weights > 0])/df.residual)  
}
```

- use the fact that quasi- fits still contain a deviance, even if they set the log-likelihood to `NA`. The deviance is twice the negative log-likelihood (it’s offset by some constant which I haven’t figured out yet, but it should still work fine for model comparisons)

Example: use the values from one of the examples in `?glm`:

```
## Dobson (1990) Page 93: Randomized Controlled Trial :  
counts <- c(18,17,15,20,10,20,25,13,12)  
outcome <- gl(3,1,9)  
treatment <- gl(3,3)
```

Fit Poisson and quasi-Poisson models with all combinations of predictors:

```

glmOT.D93 <- glm(counts ~ outcome + treatment, family=poisson)
glmO.D93  <- update(glmOT.D93, . ~ . - treatment)
glmT.D93  <- update(glmOT.D93, . ~ . - outcome)
glmX.D93  <- update(glmT.D93, . ~ . - treatment)
glmQOT.D93 <- update(glmOT.D93, family=quasipoisson)
glmQO.D93 <- update(glmO.D93, family=quasipoisson)
glmQT.D93 <- update(glmT.D93, family=quasipoisson)
glmQX.D93 <- update(glmX.D93, family=quasipoisson)

```

Extract log-likelihoods:

```

(sum(dpois(counts,
           lambda=exp(predict(glmOT.D93)), log=TRUE))) ## by hand
## [1] -23.38

(logLik(glmOT.D93)) ## from Poisson fit
## 'log Lik.' -23.38 (df=5)

```

The deviance (**deviance**(glmOT.D93)=5.129 is not the same as $-2L$ ($-2*\logLik$ (glmOT.D93)=46.761), but the calculated differences in deviance are consistent, and are also extractable from the quasi-fit even though the log-likelihood is NA:

```

(-2*(logLik(glmT.D93)-logLik(glmOT.D93))) ## Poisson fit
## 'log Lik.' 5.452 (df=3)

(deviance(glmT.D93)-deviance(glmOT.D93)) ## Poisson fit
## [1] 5.452

(deviance(glmQT.D93)-deviance(glmQOT.D93)) ## quasi-fit
## [1] 5.452

```

Compare hand-computed dispersion (in two ways) with the dispersion computed by **summary.glm()** on a quasi-fit:

```

(dfun(glmOT.D93))
## [1] 1.293

(sum(residuals(glmOT.D93, "pearson")^2)/glmOT.D93$df.residual)
## [1] 1.293

(summary(glmOT.D93)$dispersion)

```

```

## [1] 1
(summary(glmQOT.D93)$dispersion)
## [1] 1.293

```

Examples

bbmle package (Ben Bolker), CRAN/R-forge

```

library(bbmle)

## Loading required package:  methods
## Loading required package:  stats4

(qAIC(glmOT.D93,dispersion=dfun(glmOT.D93)))
## [1] 46.16

(qAICc(glmOT.D93,dispersion=dfun(glmOT.D93),nobs=length(counts)))
## [1] 90.16

ICtab(glmOT.D93,glmT.D93,glmO.D93,glmX.D93,
      dispersion=dfun(glmOT.D93),type="qAIC")

##          dqAIC  df
## glmO.D93  0.0   3
## glmX.D93  0.2   1
## glmOT.D93 4.0   5
## glmT.D93  4.2   3

ICtab(glmOT.D93,glmT.D93,glmO.D93,glmX.D93,
      dispersion=dfun(glmOT.D93),
      nobs=length(counts),type="qAICc")

##          dqAICc df
## glmX.D93  0.0   1
## glmO.D93  7.8   3
## glmT.D93 12.0   3
## glmOT.D93 43.8   5

detach("package:bbmle")

```

AICcmodavg package (Marc Mazerolle), CRAN

```
library(AICcmodavg)
aictab(list(glmOT.D93,glmT.D93,glmO.D93,glmX.D93),
       modnames=c("OT","T","O","X"),
       c.hat=dfun(glmOT.D93))

##
## Model selection based on QAICc :
## (c-hat estimate = 1.293 )
##
##   K QAICc Delta_QAICc QAICcWt Cum.Wt Quasi.LL
## X 2 46.37      0.00    0.98    0.98   -20.19
## O 4 54.16      7.78    0.02    1.00   -18.08
## T 4 58.37     12.00    0.00    1.00   -20.19
## OT 6 90.16     43.78    0.00    1.00   -18.08

detach("package:AICcmodavg")
```

MuMIn package (Kamil Bartoń), r-forge

```
library(MuMIn)
(gg <- dredge(glmOT.D93,rank="QAIC", chat=dfun(glmOT.D93)))

## Global model call: glm(formula = counts ~ outcome + treatment, family = poisson)
## ---
## Model selection table
##   (Intercept) outcome treatment df logLik QAIC delta weight
## 2 3.045      +           3 -23.38 44.2 0.00 0.464
## 1 2.813      +           1 -26.11 44.4 0.22 0.417
## 4 3.045      +           5 -23.38 48.2 4.00 0.063
## 3 2.813      +           3 -26.11 48.4 4.22 0.056

(ggc <- dredge(glmOT.D93,rank="QAICc",chat=dfun(glmOT.D93)))

## Global model call: glm(formula = counts ~ outcome + treatment, family = poisson)
## ---
## Model selection table
##   (Intercept) outcome treatment df logLik QAICc delta weight
## 1 2.813      +           1 -26.11 46.4 0.00 0.978
## 2 3.045      +           3 -23.38 54.2 7.78 0.020
## 3 2.813      +           3 -26.11 58.4 12.00 0.002
## 4 3.045      +           5 -23.38 90.2 43.78 0.000

detach("package:MuMIn")
```

Since `dredge` is clever, can work with quasi- models as well by using `deviance()`:

```
(ggqc <- dredge(glmQOT.D93, rank="QAICc",
                 chat=summary(glmQOT.D93)$dispersion))
```

gives identical results to the previous table.

Notes: ICtab only gives delta-IC, limited decimal places (on purpose, but how do you change these defaults if you want to?). Need to add 1 to parameters to account for scale parameter. When doing corrected-IC you need to get the absolute number of parameters right, not just the relative number ... Not sure which classes of models each of these will handle (lm, glm, (n)lme, lme4, mle2 ...). Remember need to use overdispersion parameter from most complex model. glmmPQL: needs to be hacked somewhat more severely (does not contain deviance element, logLik has been NA'd out).

package	lm	glm	(n)lme	multinom	polr	lme4	mle2
AIcmodavg	y	y	y	y	y	?	?
MuMIn	?	?	?	?	?	?	?
mle2	?	?	?	?	?	?	?
