

# Package ‘FIESTAutils’

March 21, 2023

**Type** Package

**Title** Utility Functions for Forest Inventory Estimation and Analysis

**Version** 1.1.5

**Date** 2023-03-20

**Description** A set of tools for data wrangling, spatial data analysis, statistical modeling (including direct, model-assisted, photo-based, and small area tools), and USDA Forest Service data base tools. These tools are aimed to help Foresters, Analysts, and Scientists extract and perform analyses on USDA Forest Service data.

**Depends** R (>= 3.5.0)

**Imports** data.table, DBI, graphics, hbsae, JoSAE, mase, methods, nlme, Rcpp, RColorBrewer, rgdal, RPostgreSQL, RSQLite, sae, sf, sp, sqldf, stats, units, utils, xml2, largeList

**Suggests** knitr

**License** GPL-3

**Copyright** See file COPYRIGHTS for details.

**URL** <https://github.com/USDAForestService/FIESTAutils>

**BugReports** <https://github.com/USDAForestService/FIESTAutils/issues>

**Encoding** UTF-8

**LazyData** true

**LinkingTo** Rcpp

**RoxygenNote** 7.2.3

**NeedsCompilation** yes

**Author** Tracey Frescino [aut],  
Chris Toney [aut],  
Grayson White [aut, cre]

**Maintainer** Grayson White <graysonwhite13@gmail.com>

**Repository** CRAN

**Date/Publication** 2023-03-21 16:20:07 UTC

datExportData	<i>Spatial - Exports a data frame object.</i>
---------------	---

---

### Description

Exports a data frame object to a specified output.

### Usage

```
datExportData(
  dfobj,
  create_dsn = FALSE,
  index.unique = NULL,
  index = NULL,
  savedata_opts = savedata_options()
)
```

**Arguments**

dfobj	Data.frame class R object. Data frame object to export.
create_dsn	Boolean.
index.unique	String. Name of variable(s) in dfobj to make unique index.
index	String. Name of variable(s) in dfobj to make (non-unique) index.
savedata_opts	List. See help(savedata_options()) for a list of options.

**Details**

Wrapper for sf::st\_write function.

**Value**

An sf spatial object is written to the out\_dsn.

**Note**

If out\_fmt='shp':

The ESRI shapefile driver truncates variable names to 10 characters or less. Variable names are changed before export using an internal function (trunc10shp). Name changes are output to the outfolder, 'outshpnm'\_newnames.csv.

If sf object has more than 1 record, it cannot be exported to a shapefile.

---

DBtestPostgreSQL      *Database - Test a SQLite database table.*

---

**Description**

Checks a SQLite database.

**Usage**

```
DBtestPostgreSQL(dbname, dbconnopen = TRUE)
```

**Arguments**

dbname	String. Name of PostgreSQL database.
dbconnopen	Logical. If TRUE, the dbconn connection is not closed.

**Value**

An S4 object that inherits from DBIConnection via the DBI package. For more information, see 'help(DBI::dbConnect)'.

**Author(s)**

Tracey S. Frescino

DBtestSQLite

*Database - Checks access to a SQLite database.***Description**

Checks a SQLite database.

**Usage**

```
DBtestSQLite(
  SQLitefn = NULL,
  gpkg = FALSE,
  dbconnopen = FALSE,
  outfolder = NULL,
  showlist = TRUE,
  returnpath = TRUE,
  createnew = TRUE,
  stopifnull = FALSE,
  overwrite = TRUE
)
```

**Arguments**

SQLitefn	String. Name of SQLite database (*.sqlite).
gpkg	Logical. If TRUE, SQLite geopackage database.
dbconnopen	Logical. If TRUE, the dbconn connection is not closed.
outfolder	String. Optional. Name of output folder. If NULL, export to working directory.
showlist	Logical. If TRUE, shows list of tables in database.
returnpath	Logical. If TRUE, returns full path to SQLite file name. If FALSE, returns SQLitefn.
createnew	If TRUE, creates new SQLite database.
stopifnull	Logical. If TRUE, stops if SQLite database doesn't exist.
overwrite	Logical. If TRUE, overwrites data.

**Value**

Character string containing the path to the SQLite database of interest.

**Author(s)**

Tracey S. Frescino

---

DEFAULT_NODATA	<i>Reference tables - NODATA Values.</i>
----------------	--

---

**Description**

List of NODATA Values based on data type.

**Format**

A list of 6 components.

**Source**

gdal values.

---

eval_options	<i>List of population tables.</i>
--------------	-----------------------------------

---

**Description**

Returns a list of user-supplied parameters and parameter values for data evaluation (FIA or custom) extraction to be supplied to \*DB functions.

**Usage**

```
eval_options(
  Cur = FALSE,
  Endyr = NULL,
  Endyr.filter = NULL,
  All = FALSE,
  Type = "VOL",
  evalid = NULL,
  invyrs = NULL,
  measyrs = NULL,
  evalType = "VOL",
  ...
)
```

**Arguments**

Cur	Logical. If eval='FIA': extract plots with most current evaluation. If eval='custom': extract the most current sampled plots in the database.
Endyr	Integer (YYYY). If eval='FIA', defines end year for extracting one or more FIA evaluation. If eval='custom', defines end year for extracting the most current sampled plots until.

<code>Endyr.filter</code>	Filter. If <code>endyr != NULL</code> , a filter to identify when to use <code>measEndyr</code> , such as areas or plots identified as being disturbed in a particular year. In this example, plots sampled after the disturbance will be excluded.
<code>All</code>	Logical. If <code>eval='FIA'</code> : includes all evaluations in database (annual inventory only). If <code>eval='custom'</code> : includes all years in database (annual inventory only).
<code>Type</code>	String vector. Evaluation types ('CURR', 'VOL', 'P2VEG', 'DWM', 'INV', 'CHNG', 'GRM', 'REGEN'). If <code>eval='FIA'</code> , <code>Type</code> is equivalent to plots for FIA Evaluations where 'CURR' includes nonsampled plots; 'VOL' includes plots used for area or tree estimates; <code>Type = 'GRM'</code> includes plots used for growth, removals, mortality; and <code>Type = 'CHNG'</code> includes plots used for change estimates (See FIA database manual for region availability and/or differences ( <a href="https://www.fia.fs.usda.gov/library/database-documentation/index.php">https://www.fia.fs.usda.gov/library/database-documentation/index.php</a> ) If <code>eval='custom'</code> , the associated tables are extracted for each <code>Type</code> . Multiple <code>Types</code> are accepted.
<code>evalid</code>	Integer. Only <code>eval='FIA'</code> : extract data for a specific evaluation period. See notes for more information about FIA Evaluations.
<code>invyrs</code>	Integer vector. <code>eval='custom'</code> : defines specific inventory years of data (e.g., 2010:2015). See FIA manual for definition of <code>INVYR</code> .
<code>measyrs</code>	Integer vector. <code>eval='custom'</code> : defines specific measurement years of data (e.g., 2010:2015).
<code>evalType</code>	Deprecated. Use <code>Type</code> instead.
<code>...</code>	For extensibility.

### Details

If no parameters, an empty list is returned.

### Value

A list of user-supplied parameters and parameter values for strata.

### Author(s)

Tracey S. Frescino

### Examples

```
eval_options(invyrs = 2015:2018)
```

---

GDT\_NAMES

*Reference tables - gdal data types.*

---

### Description

Table with `gdal` data type names.

**Format**

A vector of 12 data type values.

**Source**

gdal values.

---

kindcd3old	<i>Reference table - List of RMRS plots that have fallen out of inventory because they were not found or they were in the wrong place.</i>
------------	--

---

**Description**

Table with variable codes (VALUE) and descriptions (MEANING).

**Format**

A dataframe

**Source**

FIA query. SELECT bp.STATECD, bp.COUNTYCD, bp.PLOT\_FIADB NEW\_PLOT, bp.START\_DATE NEW\_START\_DATE, bp\_old.COUNTYCD OLD\_COUNTYCD, bp\_old.PLOT\_FIADB OLD\_PLOT, bp\_old.END\_DATE OLD\_END\_DATE, p.CN FROM fs\_nims\_rmrs.NIMS\_BASE\_PLOT bp JOIN fs\_nims\_rmrs.NIMS\_BASE\_PLOT bp\_old on (bp.PREV\_NBP\_CN=bp\_old.CN) JOIN fs\_nims\_rmrs.NIMS\_PLOT\_RMRS p on(p.NBP\_CN=bp\_old.CN) WHERE p.KINDCD = 1 ORDER BY bp.STATECD, bp.COUNTYCD, bp\_old.PLOT\_FIADB"

---

multest_options	<i>Multest output options.</i>
-----------------	--------------------------------

---

**Description**

Returns a list of user-supplied parameters and parameter values for outputting multest with custom aesthetics.

**Usage**

```
multest_options(
  multest_fmt = "csv",
  multest_outfolder = NULL,
  multest_dsn = NULL,
  multest_layer = NULL,
  multest.append = FALSE,
  multest.AOIonly = FALSE,
  ...
)
```

**Arguments**

`multest_fmt` String. Format for multest output tables ('csv', 'sqlite', 'gpkg').  
`multest_outfolder` String. Outfolder for multest. If NULL, same as outfolder.  
`multest_dsn` String. Name of database if `multest_fmt = c('sqlite', 'gpkg')`.  
`multest_layer` String. Name of database layer if `multest_fmt = c('sqlite', 'gpkg')`.  
`multest.append` Logical. If TRUE, appends multest dataframe to output.  
`multest.AOIonly` Logical. If TRUE, appends multest dataframe (AOI=1) to output.  
`...` For extensibility.

**Details**

If no parameters, an empty list is returned.

**Value**

A list of user-supplied parameters and parameter values for outputting multest.

**Author(s)**

Grayson W. White

**Examples**

```
multest_options(multest.append = TRUE)
```

---

rasterToVRT

*Write a GDAL virtual raster file (VRT)*

---

**Description**

Write a GDAL VRT file for a source raster with options for repositioning and and resampling the source data at a different pixel resolution

**Usage**

```

rasterToVRT(
  srcfile,
  relativeToVRT = 0,
  vrtfile = tempfile("tmprast", fileext = ".vrt"),
  resolution = NULL,
  subwindow = NULL,
  align = TRUE,
  resampling = "nearest"
)
  
```

**Arguments**

srcfile	Source raster file name.
relativeToVRT	Integer. Should srcfile be interpreted as relative to the .vrt file (value is 1) or not relative to the .vrt file (value is 0)? If value is 1, the .vrt file is assumed to be in the same directory as srcfile and basename(srcfile) is used in .vrt.
vrtfile	Output VRT file name.
resolution	A numeric vector of length two, with xres, yres. The pixel size must be expressed in georeferenced units. Both must be positive values. The source pixel size is used if resolution is not specified.
subwindow	A numeric vector of length four, with xmin, ymin, xmax and ymax values (e.g., sp::bbox or sf::st_bbox). Selects a subwindow of the source raster with corners given in georeferenced coordinates (in the source CRS). If not given, the upper left corner of the VRT will be the same as source, and the VRT extent will be the same or larger than source depending on resolution.
align	Logical scalar. If TRUE, the upper left corner of the VRT extent will be set to the upper left corner of the source pixel that contains subwindow xmin, ymax. The VRT will be pixel-aligned with source if the VRT resolution is the same as the source pixel size, otherwise VRT extent will be the minimum rectangle that contains subwindow for the given pixel size. If FALSE, the VRT upper left corner be exactly subwindow xmin, ymax, and the VRT extent will be the minimum rectangle that contains subwindow for the given pixel size. If subwindow is not given, the source window is the source raster extent in which case align=FALSE has no effect.
resampling	The resampling method to use if xsize, ysize of the VRT is different from the size of the underlying source rectangle (in number of pixels). The values allowed are nearest, bilinear, cubic, cubicspline, lanczos, average and mode.

**Details**

rasterToVRT is useful for virtually clipping a raster to a subwindow, or virtually resampling at a different pixel resolution. The output VRT file will have the same coordinate system as the source raster.

---

Rcpp\_CmbTable-class    *Class "Rcpp\_CmbTable"*

---

**Description**

C++ program to combine raster files.

**Extends**

Class "[C++Object](#)", directly.

All reference classes extend and inherit methods from "[envRefClass](#)".

**Author(s)**

Chris Toney

---

Rcpp\_RunningStats-class

*Class "Rcpp\_RunningStats"*

---

**Description**

C++ program to calculate mean and variance on a data stream.

**Extends**

Class "[C++Object](#)", directly.

All reference classes extend and inherit methods from "[envRefClass](#)".

**Author(s)**

Chris Toney

---

ref\_codes

*Reference tables - Code definitions.*

---

**Description**

Table with variable codes (VALUE) and descriptions (MEANING).

**Format**

A dataframe with 7 columns, VARIABLE, VALUE, MEANING, COLORHEX, GROUP, GROUPNM, GROUPHEX.

**Source**

FIA look-up tables.

**References**

---

ref_diacl2in	<i>Reference table - diameter 2-inch class codes (DIA).</i>
--------------	---

---

**Description**

Table with min (MIN), max (MAX), and 2-inch class diameter codes (MEANING).

**Format**

A dataframe with 3 columns, MIN, MAX, and MEANING.

**Source**

Imported from comma-delimited file.

**References**

O'Connell, B.M.; LaPoint, E.B.; Turner, J.A.; Ridley, T.; Boyer, D.; Wilson, A.M.; Waddell, K.L.; Christensen, G.; Conkling, B.L. 2012. ---

ref_domain	<i>Reference table - for generating tables.</i>
------------	---

---

**Description**

Table with row/column domain (VARNM) and their pretty names for table output (TABLENM).

**Format**

A dataframe with 2 columns, VARNM and TABLENM.

**Source**

FIA look-up table.

---

ref_estvar	<i>Reference table - for generating estimates</i>
------------	---

---

**Description**

Data frame with variable names and descriptions

**Format**

A data frame to use a reference for estimation variables and filters.

---

ref_statecd	<i>Reference table - state codes (STATECD).</i>
-------------	---

---

**Description**

Table with state codes (VALUE), name (MEANING), abbreviation (ABBR), and UNIT.

**Format**

A dataframe with 4 columns, VALUE, MEANING, ABBR, UNIT.

**Source**

Imported from comma-delimited file.

**References**

---

savadata_options	<i>Data saving options.</i>
------------------	-----------------------------

---

**Description**

Returns a list of user-supplied parameters and parameter values for saving data.

**Usage**

```
savadata_options(
  outfolder = NULL,
  out_fmt = "csv",
  outsp_fmt = "shp",
  outobj_fmt = "rds",
  out_dsn = NULL,
  out_layer = "outdat",
  outfn.pre = NULL,
  outfn.date = FALSE,
  addtitle = TRUE,
  raw_fmt = "csv",
  raw_dsn = NULL,
  overwrite_dsn = FALSE,
  overwrite_layer = TRUE,
  append_layer = FALSE,
```

```

    add_layer = TRUE,
    layer.pre = NULL,
    ...
)

```

### Arguments

outfolder	String. The outfolder to write files to. If NULL, files are written to working directory, or if gui=TRUE, a window to browse.
out_fmt	String. Format for output tables ('csv', 'sqlite', 'gpkg', 'gdb').
outsp_fmt	String. Format for output spatial ('shp', 'sqlite', 'gpkg', 'gdb').
outobj_fmt	String. Format for output spatial ('rda', 'rds', 'llo').
out_dsn	String. Data source name for output. If extension is not included, out_fmt is used. Use full path if outfolder=NULL.
out_layer	outlayer.
outfn.pre	String. If savedata=TRUE, prefix for output files. If rawdata=TRUE, prefix for rawdata files (if raw_fmt = 'csv') or raw_dsn (if raw_fmt != 'csv').
outfn.date	Logical. If TRUE, add current date to out_dsn.
addtitle	Logical. If TRUE and savedata=TRUE, adds title to outfile.
raw_fmt	String. Format for output rawdata tables ('sqlite', 'gpkg', 'csv', 'gdb').
raw_dsn	String. Data source name for rawdata output. If extension is not included, out_fmt is used. Use full path if outfolder=NULL.
overwrite_dsn	Logical. If TRUE, overwrites raw_dsn, if exists.
overwrite_layer	Logical. If TRUE, overwrites the output. If rawdata=TRUE, overwrites out_layer in rawdata folder (if raw_fmt = 'csv') or out_layers in raw_dsn (if raw_fmt != 'csv').
append_layer	Logical. If TRUE, and appends data to existing *.csv files (if *_fmt = 'csv') or *_dsn layers (if *_fmt != 'csv').
add_layer	Logical. If TRUE, adds layer to an existing out_dsn (if out_fmt != c('csv', 'shp')).
layer.pre	Layer prefix.
...	For extensibility.

### Details

If no parameters, an empty list is returned.

### Value

A list of user-supplied parameters and parameter values for saving data.

### Author(s)

Grayson W. White

**Examples**

```
savedata_options(outfolder = "path", overwrite_dsn = FALSE)
```

---

spMakeSpatial\_options *Make SpatialPoints options*

---

**Description**

Returns a list of user-supplied parameters and parameter values for making SpatialPoints.

**Usage**

```
spMakeSpatial_options(
  xvar = NULL,
  yvar = NULL,
  xy.crs = 4269,
  prj = NULL,
  datum = NULL,
  zone = NULL,
  zones = FALSE,
  aea.param = "USGS",
  ...
)
```

**Arguments**

xvar	String. Name of variable in xyplt defining x coordinate.
yvar	String. Name of variable in xyplt defining y coordinate.
xy.crs	PROJ.4 String or CRS object or Integer EPSG code defining Coordinate Reference System. (e.g., EPSG:4269-Geodetic coordinate system for North America, NAD83).
prj	String. Projection, or coordinate system of the X/Y coordinates ("longlat", "utm", "aea"). If other, include PROJ.4 string in prj4str.
datum	String. Datum of projection ("WGS84", "NAD83", "NAD27").
zone	Integer. If prj="utm", the UTM zone.
zones	Logical. If prj="utm", if the UTM zone is in the Southern hemisphere.
aea.param	String. If prj="aea", the associated lat/lon parameters (USGS: " +lat_1=29.5 +lat_2=45.5 +lat_0=23 +lon_0=-96 +x_0=0 +y_0=0"). If other, include PROJ.4 string in prj4str.
...	For extensibility.

**Details**

If no parameters, an empty list is returned.

**Value**

A list of user-supplied parameters and parameter values for strata.

**Author(s)**

Grayson W. White

**Examples**

```
spMakeSpatial_options()
```

---

strata_options	<i>Strata options.</i>
----------------	------------------------

---

**Description**

Returns a list of user-supplied parameters and parameter values for strata.

**Usage**

```
strata_options(
  getwt = FALSE,
  getwtvar = "P1POINTCNT",
  strwtvar = "strwt",
  stratcombine = TRUE,
  minplotnum.strat = 2,
  pivot = FALSE,
  nonresp = FALSE,
  ...
)
```

**Arguments**

getwt	Logical. If TRUE, calculates strata weights from stratlut getwtvar. If FALSE, strwtvar variable must be in stratlut.
getwtvar	String. If getwt=TRUE, name of variable in stratlut to calculate weights (Default = 'P1POINTCNT').
strwtvar	String. If getwt=FALSE, name of variable in stratlut with calculated weights (Default = 'strwt').
stratcombine	Logical. If TRUE, and strata=TRUE, automatically combines strata categories if less than minplotnum.strat plots in any one stratum. See notes for more info.

<code>minplotnum.strat</code>	Integer. Minimum number of plots for a stratum within an estimation unit.
<code>pivot</code>	Logical. If TRUE, pivot stratalut.
<code>nonresp</code>	Deprecated.
<code>...</code>	For extensibility.

**Details**

If no parameters, an empty list is returned.

**Value**

A list of user-supplied parameters and parameter values for strata.

**Author(s)**

Grayson W. White

**Examples**

```
strata_options(getwt = FALSE)
```

---

<code>stunitco</code>	<i>SpatialPolygonsDataFrame with FIA state, unit, county codes and names</i>
-----------------------	--

---

**Description**

Polygon feature class with state and county boundaries defined by Census Bureau, including Federal Information Processing Standards (FIPS) codes. The FIA Survey Unit code and name attributes (UNITCD, UNITNM) were appended to dataset, with joining columns of STATECD and COUNTYCD.

**Format**

A `SpatialPolygonsDataFrame` with 3233 features and 8 attributes  
 RS - FIA Research Station name  
 RSCD - FIA Research Station code  
 STATECD - FIPS state code  
 STATENM - FIPS state name  
 STATEAB - FIPS state abbreviation  
 UNITCD - FIA survey unit code  
 UNITNM - FIA survey unit name  
 COUNTYCD - FIPS county code  
 COUNTYNM - FIPS county name

**Details**

Derived from cb\_2018\_us\_county\_5m. STATEFP was converted to numeric and named STATECD  
 COUNTYFP was converted to numeric and named COUNTYCD  
 Lookup table for FIA Research Station (REF\_RESEARCH\_STATION) was downloaded from FIA DataMart on 20191105 (FI-ADB\_1.6.1.00) and joined by STATECD. A lookup table for UNITCD was created from plot data using unique STATECD, COUNTYCD, UNITCD and joined to table.

Converted to simple feature

Transformed CRS from longlat(EPSC:4269) to Albers (EPSC:5070)

Saved to R object, with compression='xz'

**Source**

Downloaded from the United States Census Bureau on 2019 November 3, format Esri Shapefile (<https://www.census.gov/geographies/mapping-files/time-series/geo/carto-boundary-file.html>) Projection: Geographic (GCS\_North\_American\_1983) EPSC: 4269

---

table_options	<i>Table aesthetics and output options.</i>
---------------	---

---

**Description**

Returns a list of user-supplied parameters and parameter values for outputting tables with custom aesthetics.

**Usage**

```
table_options(
  row.FIAname = FALSE,
  col.FIAname = FALSE,
  row.orderby = NULL,
  col.orderby = NULL,
  row.add0 = FALSE,
  col.add0 = FALSE,
  rowlut = NULL,
  collut = NULL,
  rawonly = FALSE,
  raw.keep0 = FALSE,
  rowgrp = FALSE,
  rowgrpnm = NULL,
  rowgrpord = NULL,
  totals = TRUE,
  allin1 = FALSE,
  metric = FALSE,
  estround = 1,
  pseround = 2,
  estnull = "--",
```

```

    psnull = "--",
    divideby = NULL,
    ...
)

```

### Arguments

row.FIAname	Logical. If TRUE, retrieves default FIA reference names for rowvar located in ref_codes data frame. Names are only available for certain variables (Check <code>sort(unique(ref_codes\$VARIABLE))</code> for available names. If row.FIAname = TRUE and rowvar is in ref_codes, the rowvar name is used for the output table, and the rowvar code is used to sort.
col.FIAname	Logical. If TRUE, retrieves default FIA reference names for colvar located in ref_codes data frame. Names are only available for certain variables. Check: <code>sort(unique(ref_codes\$VARIABLE))</code> for available names. If col.FIAname = TRUE and rowvar is in ref_codes, the colvar name is used for the output table, and the colvar code is used to sort.
row.orderby	String. Optional. Name of variable to sort table rows. Both the rowvar and row.orderby variables must be included in the same input data.frame. if NULL, and row.FIAname=FALSE or rowvar is not in ref_codes, the rows are ordered by rowvar.
col.orderby	String. Optional. Name of variable to sort table columns. Both the colvar and col.orderby variables must be included in the same input data.frame. if NULL, and col.FIAname=FALSE or colvar is not in ref_codes, the columns are ordered by colvar.
row.add0	Logical. If TRUE, include rows with 0 values to the output table.
col.add0	Logical. If TRUE, include columns with 0 values to the output table.
rowlut	Data frame. A lookup table with variable codes and code names to include as rows of output table (See notes for more information and format).
collut	Data frame. A lookup table with variable codes and code names to include as columns of output table (See notes for more information and format).
rawonly	Logical. If TRUE, only rawdata are output. If dataset includes many estimation units, and only raw data tables are desired, it is more efficient to output raw data only.
raw.keep0	Logical. If TRUE, keep 0 values in raw data tables.
rowgrp	Logical. If TRUE, appends row groups to first column of table. Only available if group category exists in ref_codes table or defined in rowgrpnm (e.g., FORTYPGRPCD, OWNGRPCD).
rowgrpnm	String. Name of variable for grouping rowvar. Variable must be included in same input table as rowvar.
rowgrpord	String. Name of variable to sort row group variable. Variable must be included in same input table as rowgrpnm.
totals	Logical. If TRUE, returns total estimate (mean * AREAUSED).
allin1	Logical. If TRUE, both estimates and percent sample error are output in one table as: estimates (percent sample error).

metric	Logical. If TRUE, output if returned in metric units.
estround	Integer. Number of decimal places for estimates.
pseround	Integer. Number of decimal places for percent sampling error.
estnull	Number or character. The number or symbol to use to indicate 'not sampled' for estimate.
psenull	Number or character. The number or symbol to use to indicate 'not sampled' for percent standard error.
divideby	String. Conversion number for output ('hundred', 'thousand', 'million').
...	For extensibility.

**Details**

If no parameters, an empty list is returned.

**Value**

A list of user-supplied parameters and parameter values for outputting tables with custom aesthetics.

**Author(s)**

Grayson W. White

**Examples**

```
table_options(row.FIName = TRUE, col.FIName = TRUE)
```

---

title_options	<i>Title output options.</i>
---------------	------------------------------

---

**Description**

Returns a list of user-supplied parameters and parameter values for outputting title with custom aesthetics.

**Usage**

```
title_options(
  title.main = NULL,
  title.ref = NULL,
  title.rowvar = NULL,
  title.colvar = NULL,
  title.unitvar = NULL,
  title.estvar = NULL,
  title.estvarn = NULL,
```

```

    title.filter = NULL,
    title.units = "acres",
    ...
)

```

### Arguments

title.main	String. TITLE, if savedata=TRUE and/or returntitle=TRUE: the complete title used for table. If title.main=NULL, the title.* parameters are used to generate title string. Note: if title.ref is not NULL, it is added to title.main.
title.ref	String. TITLE, if savedata=TRUE and/or returntitle=TRUE: the ending text of the table title (e.g., Nevada, 2004-2005). If NULL, = "".
title.rowvar	String. TITLE, if savedata=TRUE and/or returntitle=TRUE: pretty name for the row domain variable. If NULL, = rowvar.
title.colvar	String. TITLE, if savedata=TRUE and/or returntitle=TRUE: pretty name for the column domain variable. If NULL, = colvar.
title.unitvar	String. TITLE, if savedata=TRUE and/or returntitle=TRUE: pretty name for the estimation unit variable. If NULL, = unitvar.
title.estvar	String. TITLE: if savedata=TRUE and/or returntitle=TRUE: pretty name for the estimate variable. If NULL, title.estvar = estvar.name.
title.estvarn	String. TITLE: if savedata=TRUE and/or returntitle=TRUE: pretty name for the estimate variable. If NULL, title.estvar = estvar.name.
title.filter	String. TITLE, if savedata=TRUE and/or returntitle=TRUE: pretty name for filter(s). If title.filter=NULL, a default is generated from cfilter. If title.filter="", no title.filter is used.
title.units	String.
...	For extendibility.

### Details

If no parameters, an empty list is returned.

### Value

A list of user-supplied parameters and parameter values for outputting titles with custom aesthetics.

### Author(s)

Grayson W. White

### Examples

```
title_options(title.main = "My fancy title", title.estvar = "Estimate title")
```

---

unit_options	<i>Unit options.</i>
--------------	----------------------

---

**Description**

Returns a list of user-supplied parameters and parameter values for unit.

**Usage**

```
unit_options(
  unitvar2 = NULL,
  areaunits = "acres",
  minplotnum.unit = 10,
  unit.action = "keep",
  npixelvar = "npixels",
  ...
)
```

**Arguments**

unitvar2	String. Name of a second level estimation unit variable in unitarea and cond or pltassgn with assignment for each plot (e.g., 'STATECD').
areaunits	String. Units of areavar in unitarea ('acres', 'hectares').
minplotnum.unit	Integer. Minimum number of plots for estimation unit.
unit.action	String. What to do if number of plots in an estimation unit is less than minplotnum.unit ('keep', 'remove' 'combine'). If unit.action='combine', combines estimation unit to the following estimation unit, ordered in unitzonal or stratalut.
npixelvar	String. Name of variable in unitlut defining number of pixels by estimation unit.
...	For extensibility.

**Details**

If no parameters, an empty list is returned.

**Value**

A list of user-supplied parameters and parameter values for strata.

**Author(s)**

Grayson W. White

**Examples**

```
unit_options()
```

---

xy_options	<i>List of population tables.</i>
------------	-----------------------------------

---

**Description**

Returns a list of user-supplied parameters and parameter values for data xyuation (FIA or custom) extraction to be supplied to \*DB functions.

**Usage**

```
xy_options(
  xy.uniqueid = "CN",
  xvar = "LON",
  yvar = "LAT",
  xy.crs = 4269,
  xyjoinid = NULL,
  ...
)
```

**Arguments**

xy.uniqueid	String. Unique identifier of xy.
xvar	String. Name of variable in xy defining x coordinate.
yvar	String. Name of variable in xy defining y coordinate.
xy.crs	PROJ.4 String or CRS object or Integer EPSG code defining Coordinate Reference System.
xyjoinid	String. Name of variable in xy to join to plot data. If NULL, xyjoinid = xy.uniqueid.
...	For extensibility.

**Details**

If no parameters, an empty list is returned.

**Value**

A list of user-supplied parameters and parameter values for strata.

**Author(s)**

Tracey S. Frescino

**Examples**

```
xy_options(xvar="LON", yvar="LAT")
```
