9161 55.07496 8.37477

9162 55.07496 8.458109

9163 55.02495 8.37477

9164 55.02496 8.45811

~~10152 54.97496 8.291435~~

10154 54.92495 8.291437

10161 54.97496 8.374774

10163 54.92496 8.374774

I would need to calculate group mean but two values from the group have only last decimal number I would like that R takes them as a So in this case it would calculate the mean of 9161, 9162 and 9163 as 9164 differs in only one decimal.
